About

Systems Engineer specialising in automation, scheduling, and cloud technologies, with experience operating mission-critical workloads at scale in financial services. Skilled in Python, AWS, Autosys, PowerShell, and CI/CD practices, with a track record of improving reliability, reducing vulnerabilities, and delivering large-scale migrations (e.g. 1,700+ Autosys job orchestration cutover for upgrading SAS infrastructure).

Applied use of AI-assisted development tools (Copilot, OpenAI API integrations) to accelerate delivery while maintaining security and style compliance, and to automate personal workflows (knowledge management, study, and data processing).

Full expanded CV, project details, and deployment information available at cv.gatherer.tech

Work History

Data Engineer - Orchestration

Barclays PLC (formerly Tesco Bank), Aug '24

- Operate and enhance **Autosys** scheduling estate of **11,990 jobs in 2,702 boxes** across SIT, PPE, and PROD, protecting mission-critical Category A banking services.
- Led orchestration for the **SAS infrastructure migration**: updated and deployed **1,796 jobs in 535 boxes**, developed new JIL, environment rollouts, shakedown testing, troubleshooting, cutover support, and decommission of legacy jobs. Acted as primary liaison with SAS Upgrade project manager.
- Investigate and resolve complex **filewatcher and batch failures** by analysing job chains, Perl/CTL scripts, and file dependencies via Autosys CLI, WCC, and local databases.
- Develop **Python tooling** for job analysis, reporting, and automation:
 - Built data pipelines using **pandas** to adjust job metadata for deployment to ServiceNow knowledge articles, improving visibility of job ownership.
 - Enhanced orchestration team tools (workspace setup, deployment scripts), introducing **PEP8 compliance, pylint, and Black formatting**; raised mean pylint scores from ~6.5-7.5 to 8.1-9.2.
 - Reduced Medium Risk Snyk vulnerability flags from 62 to 11 by fixing issues such as unsafe pickling, SQL injection, and path traversal.
- Optimise Bash and Python scripts for **mass job actions** (job reports, JIL updates, batch investigations).
- Use **SQL (SQLite)** to query job metadata for root cause analysis and reporting.
- Perform Linux operations on Autosys and FTG hosts (including **AWS-backed instances**) to maintain file workflows, update .ctl files, create cron/Bash automation, and support batch troubleshooting.
- Use **GitHub Enterprise (JIL, Python, Perl, CTL)**, **ServiceNow (change/incident/knowledge)**, **Jira/Confluence (Agile SAFe)**, **Snyk (code scanning)**, **Jenkins/CloudBees (deployments)**, **Copilot (assisted development)**.
- Work in a 17-person Orchestration squad (8 dev, 3 infra), working in SAFe Agile with code review and documentation standards. Act as point-of-contact for SAS-related orchestration following handover from a retiring senior engineer. Provide mentoring to newer staff.
- Pursuing **AWS Certified Developer - Associate** for professional growth.

Server Engineer

NHS Lothian, Oct '22 - Aug '24

- **Led annual server access review:** analysed and remediated user permissions, liaised with security and stakeholders, and automated workflows using PowerShell/Python.
- **Automated administration tasks** across Windows Server estate (PowerShell, Python), including Nagios client installs, storage monitoring, and data migrations.
- **Managed infrastructure:** VMware vSphere deployments, SQL database administration for third-party apps, and network directory design/maintenance
- **Improved service reliability** by scripting Nagios automation, reducing build times and speeding incident response.

Previous Roles

Assorted

- **Systems & Infrastructure Technician - Edinburgh Napier University (Jun '21 - Oct '22):** Packaged and deployed virtualised applications (VMware, Cloudpaging), automated deployment tasks using PowerShell/Bash/Python, and supported infrastructure rollouts and lab upgrades under tight timelines.
- **Customer Service Advisor - Centrica (Jan '18 - Aug '19):** Customer-facing operations and emergency response work.

Projects & Education

Projects (selected)

- [JIL Estate Sync](#) - Proof-of-concept AWS event-driven pipeline to automate Autosys JIL exports to GitHub, improving reliability, auditability, and version control of scheduling configurations.
- [Stormwatcher](#) - AWS serverless ETL pipeline (Lambda, S3, DynamoDB, EventBridge, SNS) built with Terraform for weather ingestion and risk scoring.
- [Cloud CV](#) - AWS S3 + CloudFront serverless CV site with CI/CD.
- [Terraform Load Balancer](#) - deployed AWS load balancer via Terraform IaC.

BEng Computer Systems And Networks

Edinburgh Napier University, Sept '21 - July '23

- Graduated with Distinction; awarded University Medal.
- Coursework included Python development, Linux systems, virtualisation, security, and network architecture.

HND Computer Networking

Edinburgh College, Aug '19 - July '21 (A Grade)

Certifications

- Certified SAFe® 6 Practitioner
- Microsoft Certified: Azure Fundamentals
- Microsoft Certified: Security, Compliance & Identity Fundamentals
- Microsoft 365 Certified: Fundamentals
- *In progress:* AWS Certified Developer - Associate
